

DIGITAL FORENSICS SPECIALIST

RESOURCE CATEGORY	Cybersecurity
RESOURCE KIND	Not Specified
OVERALL FUNCTION	
COMPOSITION AND ORDERING SPECIFICATIONS	1. This position can be ordered as a single resource or in conjunction with a NIMS typed team (Cyber Incident Response Team). 2. Discuss logistics for deploying this position, such as security, lodging, transportation, and meals, prior to deployment 3. This position typically works 12 hours per shift, is self-sustainable for 72 hours, and is deployable for up to 14 days

Each type of resource builds on the qualifications of the type below it. For example, Type 1 qualifications include the qualifications in Type 2, plus an increase in capability. Type 1 is the highest qualification level.

COMPONENT	TYPE 1	TYPE 2	NOTES
DESCRIPTION	Same as Type 2	The National Incident Management System (NIMS) Type 2 Digital Forensics Specialist: 1. Collects, processes, and preserves computer-related evidence in support of network vulnerability mitigation and criminal fraud counterintelligence or law enforcement investigations 2. Works under the technical direction of the NIMS Type 1 Digital Forensics Specialist	Not Specified
EDUCATION	Not Specified	Not Specified	Not Specified
TRAINING	Same as Type 2	Completion of the following: 1. IS-100: Introduction to Incident Command System, ICS-100 2. IS-200: Incident Command System for Single Resources and Initial Action Incidents 3. IS-700: National Incident Management System, An Introduction 4. IS-800: National Response Framework, An Introduction	Any use of the term "forensics" is descriptive of a skill or capability and does not imply a law enforcement role.

COMPONENT	TYPE 1	TYPE 2	NOTES
EXPERIENCE	<p>Same as Type 2, PLUS: Knowledge, Skills, and Abilities:</p> <ol style="list-style-type: none"> 1. Security event correlation tools 2. Debugging procedures and tools 3. Reverse engineering concepts 4. Network security architecture concepts, including topology, protocols, components, and principles 5. Basic system administration, network, and operating hardening techniques 6. Malware analysis tools 7. Conducting forensic analyses in multiple operating system environments 8. Analysis of captured malicious code 9. Using binary analysis tools 10. Identifying abnormal or irregular code and determining whether it is a threat 11. Identifying obscure threats and techniques 12. Interpreting results of debugger to ascertain tactics, techniques, and procedures 13. Developing, testing, and implementing network infrastructure contingency and recovery plans 14. Packet-level analysis using appropriate tools 15. Decrypting digital data collections <p>AHJ-validated experience demonstrated in the following:</p> <ol style="list-style-type: none"> 1. Collecting and analyzing intrusion artifacts and using discovered data to enable mitigation of potential computer network defense (CND) incidents within the enterprise 2. Confirming intrusion and discovering new information, if possible, after identifying intrusion via dynamic analysis 3. Decrypting seized data using technical means 4. Providing technical summary of findings in accordance with established reporting procedures 5. Examining recovered data for information of relevance to the issue at hand 6. Performing CND incident triage, to include determining scope, urgency, and potential impact; identifying the specific vulnerability; and making <p>(Continued)</p>	<p>Agency Having Jurisdiction (AHJ)-validated knowledge, skills, and abilities demonstrated in the following areas:</p> <ol style="list-style-type: none"> 1. Electronic evidence law 2. Legal rules of evidence and court procedure 3. Recognizing different types of digital forensics data 4. Deployable forensics 5. Anti-forensic tactics, techniques, and procedures 6. Common forensic tool configuration and support applications from the leading industry tools 7. Data carving tools and technique 8. Computer Fraud and Abuse Act 9. Virtual machine aware malware, aware debugger malware, and packing 10. Basic concepts and practices of processing digital forensic data 11. Encryption algorithms 12. Incident response and handling methodologies 13. Desktop, server, mainframe operating systems including Windows, Unix, Linux, Mac OS 14. Server diagnostics tools and fault identification techniques 15. Basic physical computer component and architectures, including the functions of various components and peripherals 16. File system implementations 17. Processes for seizing and preserving digital evidence 18. Hacking methodologies for common operating systems 19. Legal governance related to admission into systems 20. Processes for collecting, packaging, transporting, and storing electronic evidence to avoid alteration, loss, physical damage, or destruction of data 21. Types and collection of data 22. Webmail collection, searching/analyzing techniques, tools, and cookies 23. System files (such as log files, registry files, configuration files) that contain relevant information 24. Forensic tool suites <p>(Continued)</p>	<p>The knowledge, skills, and abilities align with the National Institute of Standards and Technology's National Initiative for Cyber Education (NICE) National Cybersecurity Workforce Framework.</p>
