AIR AMBULANCE FIXED-WING (CRITICAL CARE TRANSPORT)

DESCRIPTION
An Air Ambulance Fixed-Wing (Critical Care Transport) is a single resource that includes a single or twin-engine, jet or propeller airplane, pilot, and crew. This resource provides rapid transportation of critical care patients between hospitals. Factors such as capabilities and configuration of the individual aircraft, capabilities of the pilot, qualifications of the medical crew, and weather conditions determine the range of transport.

RESOURCE CATEGORY
Emergency Medical Services

RESOURCE KIND
Aircraft/Team

OVERALL FUNCTION
The Air Ambulance Fixed-Wing (Critical Care Transport) provides transportation, evacuation, and emergency medical care for patients via fixed-wing aircraft from one medical facility to another.

COMPOSITION AND ORDERING SPECIFICATIONS
1. Discuss logistics for deploying this resource, such as working conditions, length of deployment, security, lodging, resupply of medical services, transportation, and meals, prior to deployment
3. Requestor will provide transportation (including for patient care personnel to and from the airhead for the sending and receiving medical facilities), food, and rest facilities unless other arrangements exist
4. Provider confirms the maximum distance the Air Ambulance Fixed-Wing will transport the patient to ensure the ordering of the appropriate aircraft
5. Provider confirms the appropriate length of the runway is available for takeoff and landing
6. Provider confirms the appropriate fuel (jet fuel vs. aviation gas) and oil is available for the requested aircraft
7. Provider determines any maintenance limitations (such as number of hours the aircraft can fly before removal for routine maintenance)
8. Requestor should identify Fixed Operating Base (FOB) facilities to support air mission logistics
9. Requestor may order backup supplies and equipment, depending on number of patients and type of event
10. Requestor should specify specialty care services necessary, as number of personnel will vary with capacity of aircraft and mission
11. Requestor can order an Aeromedical Transport Manager for administrative and logistics support
12. Requestor should specify personnel required to transport patient based on patient acuity
13. Requestor must notify provider if family member(s) will accompany patient to ensure sufficient space in aircraft
14. This team does not provide transport of patients with infectious diseases as it requires specialized teams and equipment compliant with Centers for Disease Control and Prevention (CDC) guidance

Each type of resource builds on the qualifications of the type below it. For example, Type 1 qualifications include the qualifications in Type 2, plus an increase in capability. Type 1 is the highest qualification level.
