

## RADIO-ISOTOPE IDENTIFICATION DEVICE

<b>DESCRIPTION</b>	The Radio-Isotope Identification Device is a portable radiation detector, also known as a radionuclide identifier, with gamma spectroscopic capabilities and neutron indication.		
<b>RESOURCE CATEGORY</b>	Prevention	<b>RESOURCE KIND</b>	Equipment
<b>OVERALL FUNCTION</b>	This equipment identifies radioisotopes of radiological and nuclear material; operators may also use it for initial detection of radiological and nuclear material	<b>COMPOSITION AND ORDERING SPECIFICATIONS</b>	<ol style="list-style-type: none"> <li>The Agency Having Jurisdiction (AHJ) and requestor should address the following prior to deployment: <ol style="list-style-type: none"> <li>Logistics support, such as transportation and personnel</li> <li>Type of incident or event</li> <li>Spare batteries and battery recharging capabilities</li> <li>Additional device features, such as dose rate capable, low profile mode, ruggedized, and network capable</li> <li>Global Positioning System</li> </ol> </li> <li>The requestor can request this resource with or without the personnel component of a National Incident Management System (NIMS) Type 1 Preventive Radiological Nuclear Detection (PRND) Screener</li> <li>If the requestor orders this resource without personnel, the AHJ should have a NIMS Type 1 PRND Screener or provide in-person training specific to the mission, without lag time between training and mission deployment</li> </ol>

RESOURCE TYPES			TYPE 1	TYPE 2	NO TYPE 3	NO TYPE 4
COMPONENT	METRIC/ MEASURE	CAPABILITY				
Equipment	Per Resource	Isotope Identification	High Resolution Less than 1.0% Energy Resolution at 662 KeV FWHM	Medium/Low Resolution 1.0% - 9.0% Energy Resolution at 662 kilo-electron volts (KeV) full width half maximum (FWHM)	Not Applicable	Not Applicable
<b>NOTES:</b> Not Specified						

Superseded
